

CXO-Cockpit Reporting Suite for:

In 2007 we successfully introduced the CXO-Cockpit Reporting Suite for HFM. The most advanced reporting and analysis solution for Hyperion applications has since then turned into a very complete and powerful web-based Management Information platform for Hyperion FM users all over the world. The CXO-Cockpit Reporting Suite is the perfect and cost effective alternative for Oracle OBIEE 11G for HFM.

Why CXO-Cockpit for Oracle EPM | Hyperion Financial Management (HFM)?

For many years, thousands of large companies have been and still are investing in Hyperion Financial Management as their Financial and Management reporting platform. It is still the most comprehensive consolidation solution available in the market today.

Although HFM is tremendously popular amongst Finance and Controlling professionals, market research shows that HFM does have some weaknesses and especially on the output side customers have the limited choices. They can either use the native reporting tools Smartview or Hyperion Reports to get the valuable data out of HFM. Please find below the 7 most common improvements HFM users are looking for when it comes down to Reporting:

1. Managers ask for a more intuitive and graphical way to receive the crucial HFM information.
2. Reporting teams are frustrated with the repetitive manual work they have to go through every single reporting period and they desire a more automated way of delivering the Hyperion information.
3. Group Controllers and CFO's want to further limit the use of Excel within the reporting environment in order to reduce the risks of making errors.
4. Managers want the Hyperion Reports delivered faster and via the Web with drill-down capabilities.
5. Reporting teams are struggling with keeping the several separate native Hyperion Reporting tools in sync with all the changes in the underlying Hyperion model.
6. Users value sophisticated commenting capabilities within the Hyperion Management Information.
7. Controllers want to combine Hyperion data with other important non-Hyperion (i.e operational data) sources within the same Management Information platform.

To address these weaknesses CXO Solutions has specifically designed the CXO-Cockpit Reporting Suite for HFM. It delivers web-based HFM output from a single maintenance environment, the CXO Design Studio. Within the Design Studio you can build, maintain, analyze, export and print all your valuable HFM data.

Customer references for Hyperion Financial Management

Over half of our rapidly growing customer base is using the CXO-Cockpit Reporting Suite in combination with HFM. We would be very happy to put you in touch with a number of our HFM customers to have them explain what benefits they get from using CXO-Cockpit Reporting Suite. You can also visit our web-site to download the available HFM customer stories.

Seeing is believing

If you would like to experience these improvements for yourself please contact us for customer references, an initial meeting or even a short demonstration of our solution. The initial CXO-Cockpit Reporting Suite implementation takes just one week. **There is no lengthy trial and error type of IT driven project when you start with us. CXO-Cockpit is a typical "Financed owned" solution whereby we deliver a Proof of Concept on your own Hyperion application within just 2 days.**
